

Condor Expert software

Software

- Compatible with all Windows versions, including XP, Vista and 7
- Separate production and engineering user interfaces
- Each user interface fully customizable through settings
- Runtime localization in multiple languages
- Full 3D automatic testing
- Built-in support for Windows compatible CCD-cameras
- Central database for storing the test results
- Powerful module to search in the database
- Detailed visual measurement results and statistical information
- Complete SPC package included in the software
- Easy export data in various formats
- Customized reports possible
- Reports printed through Windows and generated as PDF
- **Free software updates available**

Technology leader in bond testing worldwide

A great strength of the established Condor Expert software is that it is completely open, allowing you to easily customize it for the widest range of tests. For more standard applications the Condor EZ software features onboard graphics and intelligent wizards, providing intuitive operator control. It ensures complete documentation of the test protocol, provides preset configurations and simple, intuitive operator screens, making it ideal for the production environment. The more capable and flexible options are still there should you need them, but they can be hidden for day to day use.

Condor EZ Software

Central database with SPC

The Condor software provides sophisticated SPC software. It has multiple user definable tables that can be used as SPC grouping levels for storing measurements. Control rules can be defined and used for real-time monitoring of the measurement data. Furthermore it offers comprehensive statistical information for analyzing the complete production process, including different types of graphs that can be viewed on screen or printed in a report.

Full 3D automatic testing

A major software feature is the capability of the Condor software to provide real three-dimensional automatic testing. Automatic test procedures are created and maintained through the engineering level, while operators can start automation just by a single click. Numerous features can be used for optimal customization to fully suit the requirements. For example: the input of variable data of the test sample, or the automatic generation of data extraction through print-out and/or export.

Date analysis on Condor system

Data extraction

One of the most important parts in all software that collects data like the Condor software, is the possibility to extract measurement data in several ways. The Condor software is able to export
